

Features Of Java + 80 MCQs

=====

What are important features of Java ?

=====

1) Simple

Java is easy to learn, especially if you know C or C++.

No complex concepts like pointers, multiple inheritance.

2) Object-Oriented

Everything in Java is treated as an object (except primitive types).

Supports encapsulation, inheritance, polymorphism, abstraction.

3) Platform Independent

"Write Once, Run Anywhere" (WORA).

Java code is compiled into bytecode, which runs on any machine with JVM.

4) Secure

Provides built-in security like Bytecode Verifier.

Widely used in banking, enterprise apps.

5) Robust

Strong memory management (Garbage Collector).

Exception handling and type checking reduce errors.

6) Portable

Java bytecode can run on any platform (Windows, Mac, Linux, etc.).

7) Multithreaded

Supports multithreading for parallel execution.

Useful in gaming, animations, and real-time applications.

8) Distributed

Java can be used to build distributed applications.

9) High Performance

JIT compiler provides high performance.

10) Dynamic

Can load classes dynamically at runtime.

Runtime polymorphism.

11) Interpreted + Compiled

Java programs are first compiled into bytecode (by javac) and then interpreted/executed by JVM.

12) Architecture Neutral

No hardware-dependent features → bytecode works everywhere.
